

ENERGY DRINK

Visual Effect - Group 2

BRAIN STORMING

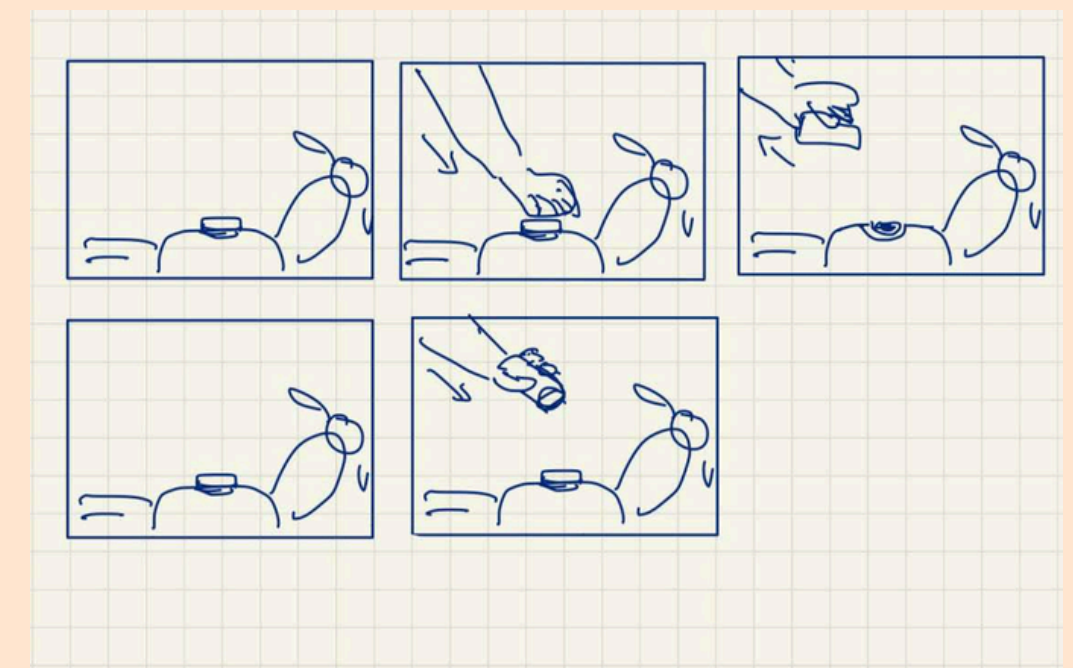

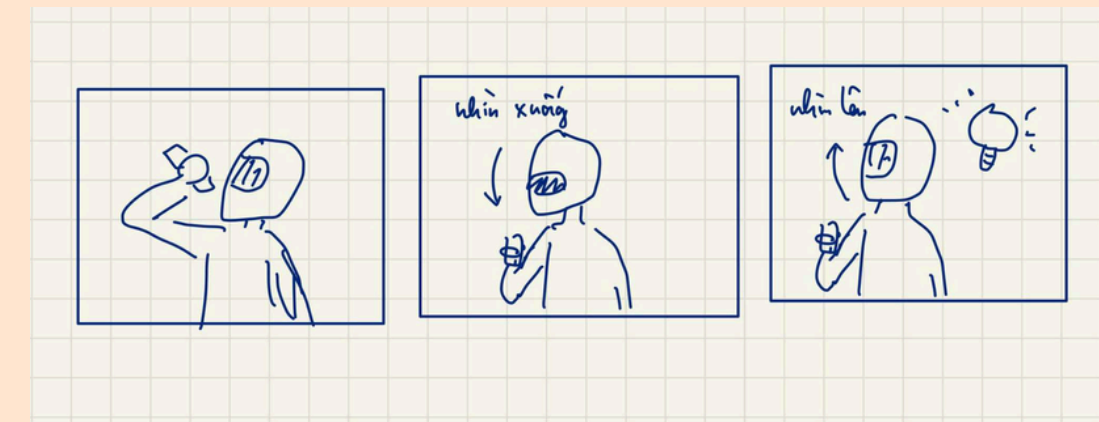

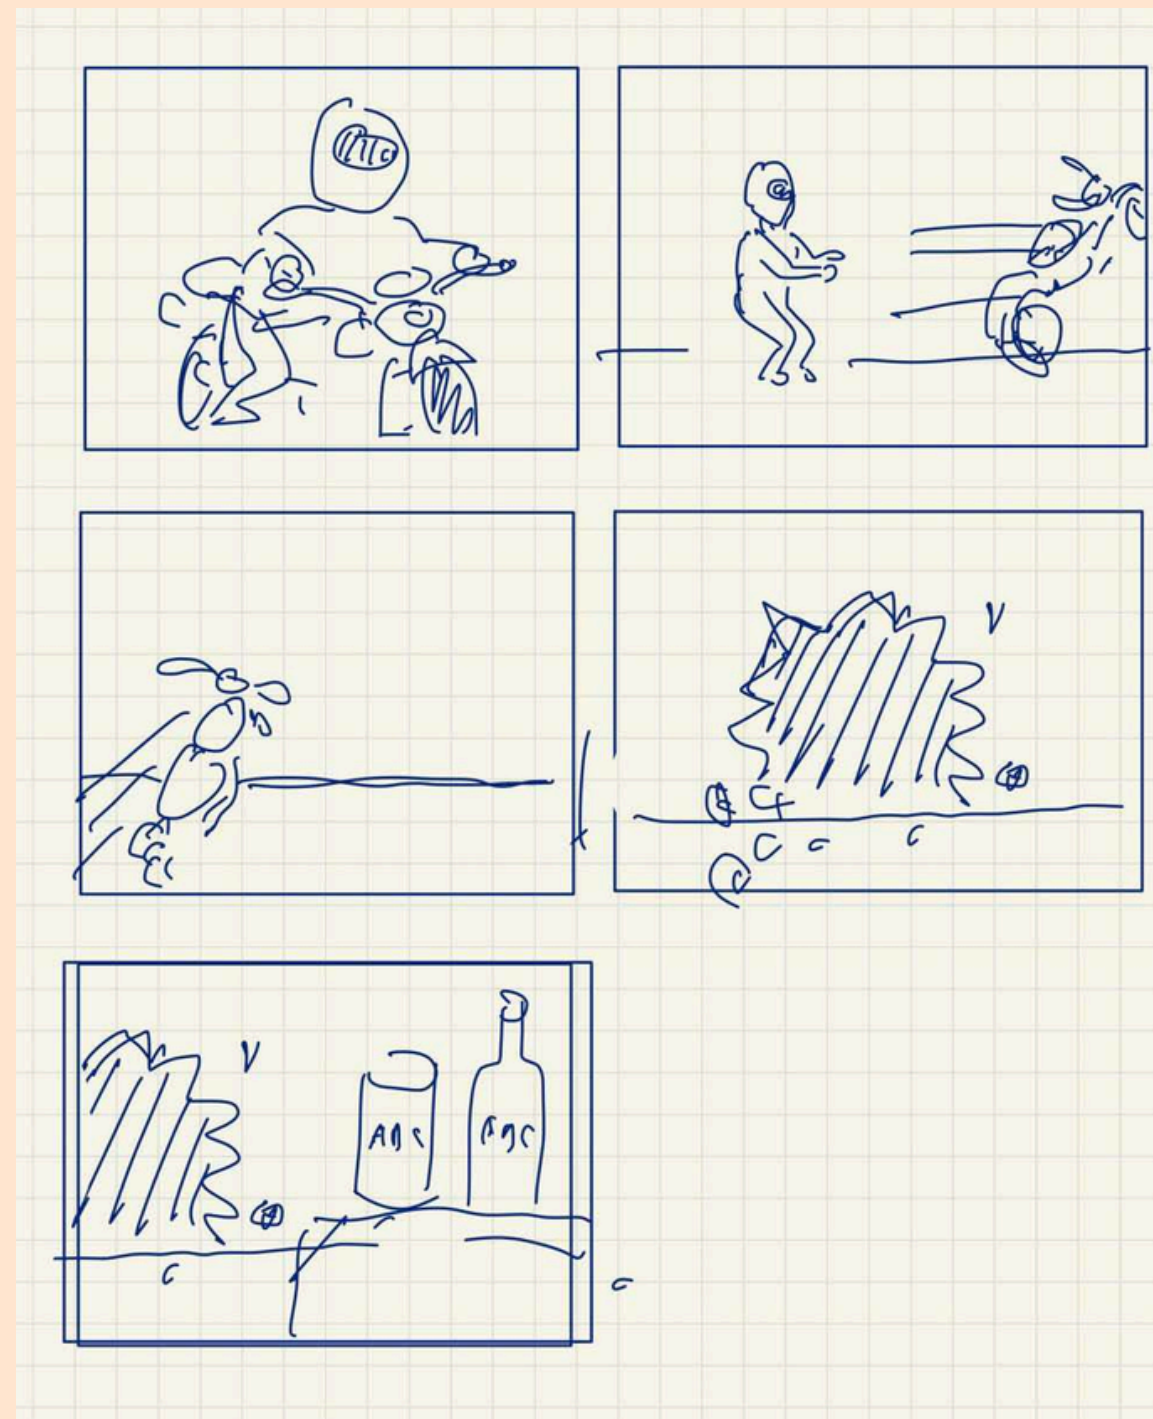

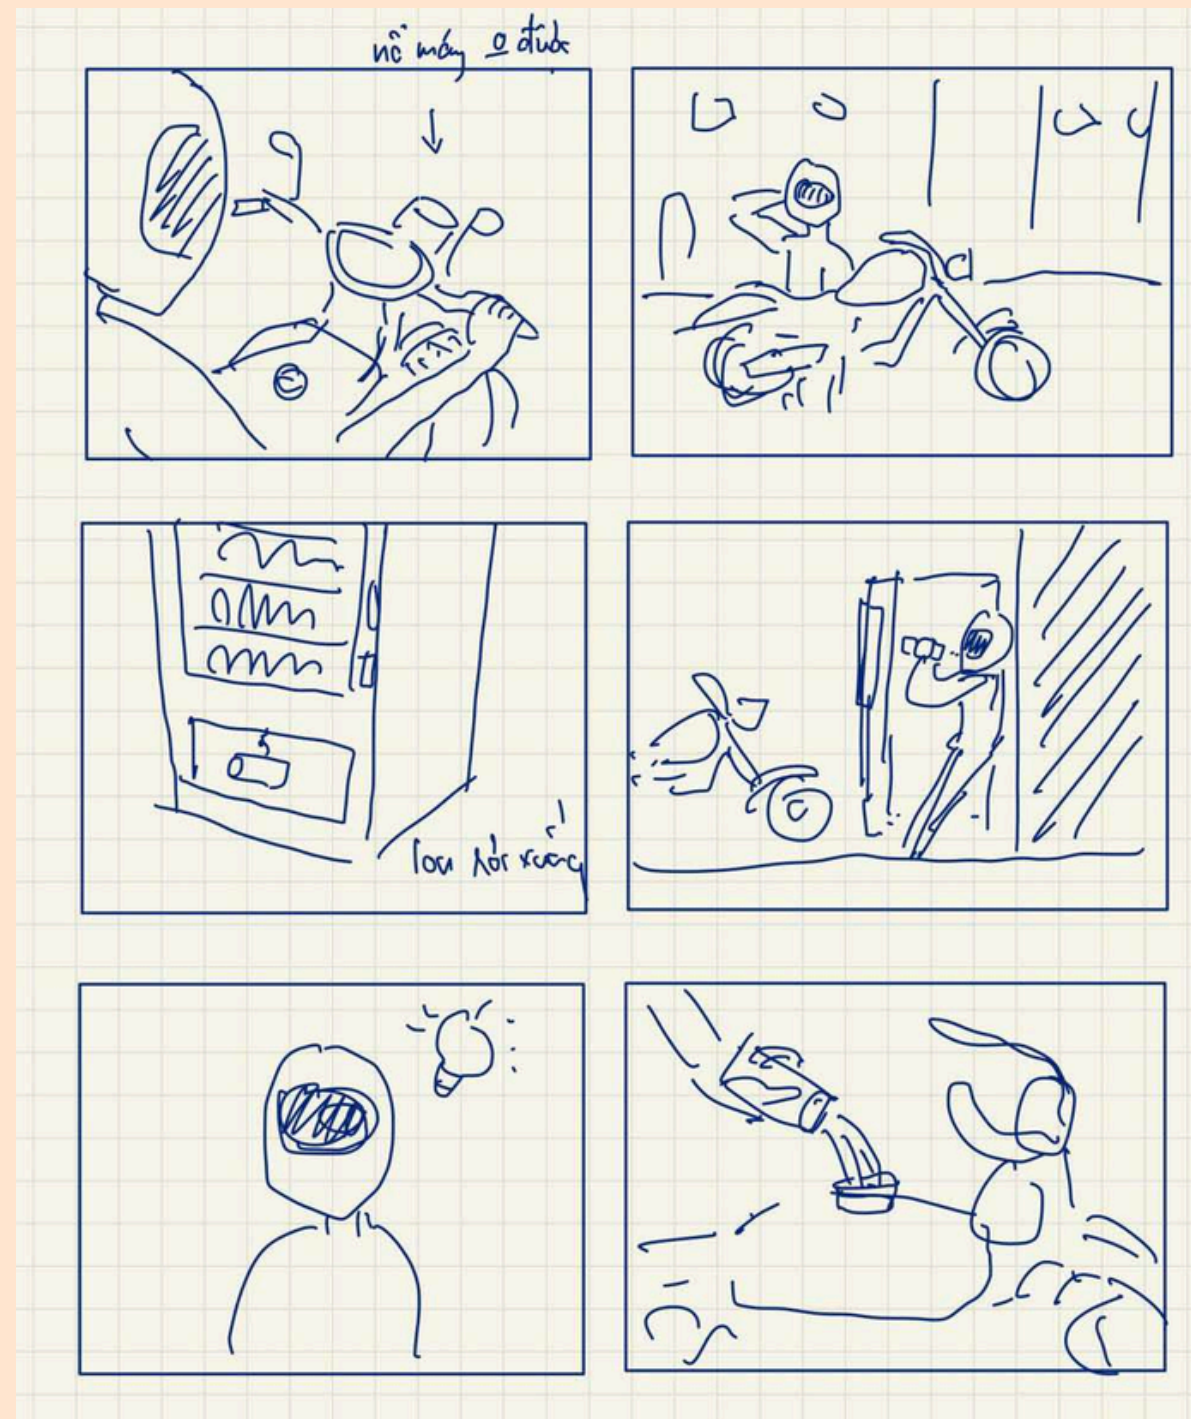

BRAIN STORMING

Idea:

A man was riding his motorcycle when it ran out of gas. He couldn't find any gas station nearby, just a vending machine. He bought a soda can and drunk it. Then he came up with an idea to use the drink as the fuel for the bike. After pouring the drink into the tank and revving the engine, the motorcycle lashed forward and collided with a wall (add explosion). The explosion panned to the advertised soda can.

STORYBOARDING

PREVISUALIZATION

PRODUCTION

Filming location: HUST

Equipments: Iphone 14, Color Checker, Clapperboard

Props: Motorcycle, soda can

POST PRODUCTION

Programs used

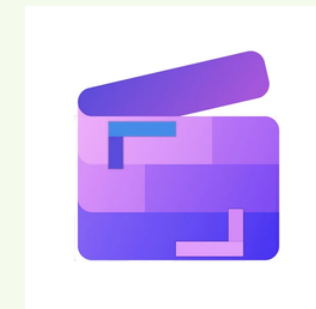

Maya, Blender
Modeling, Texturing,
Animation

Photoshop
Image manipulation

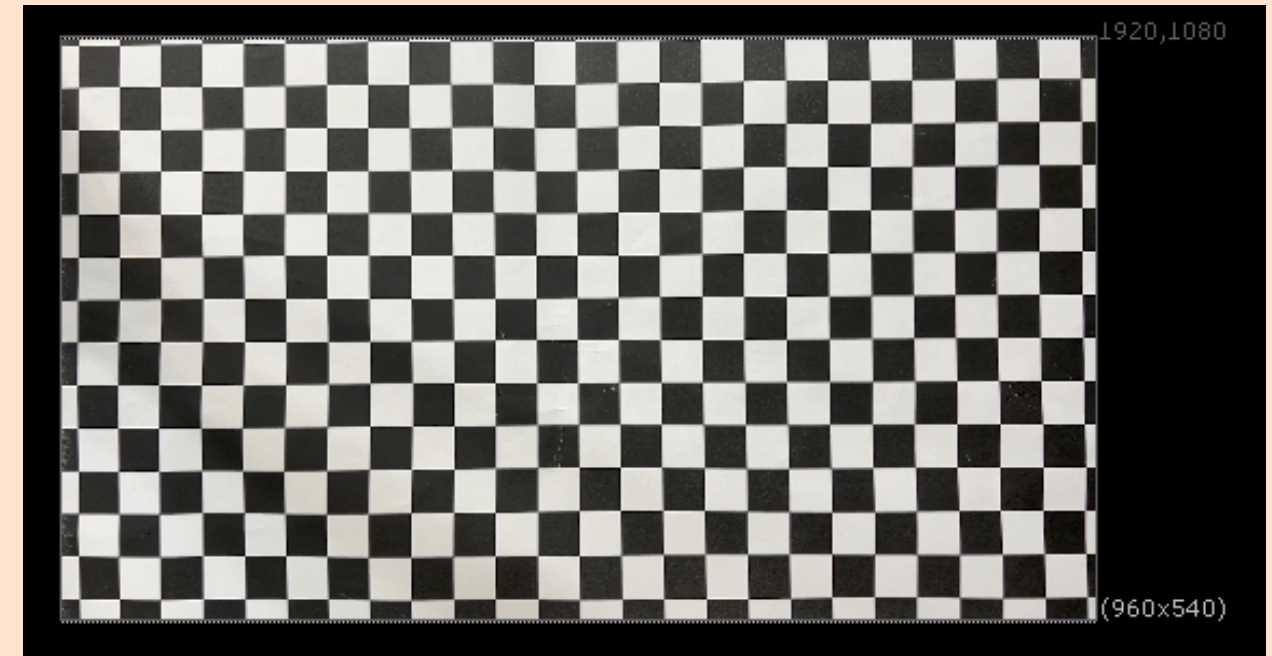

Nuke
Camera tracking,
compositing

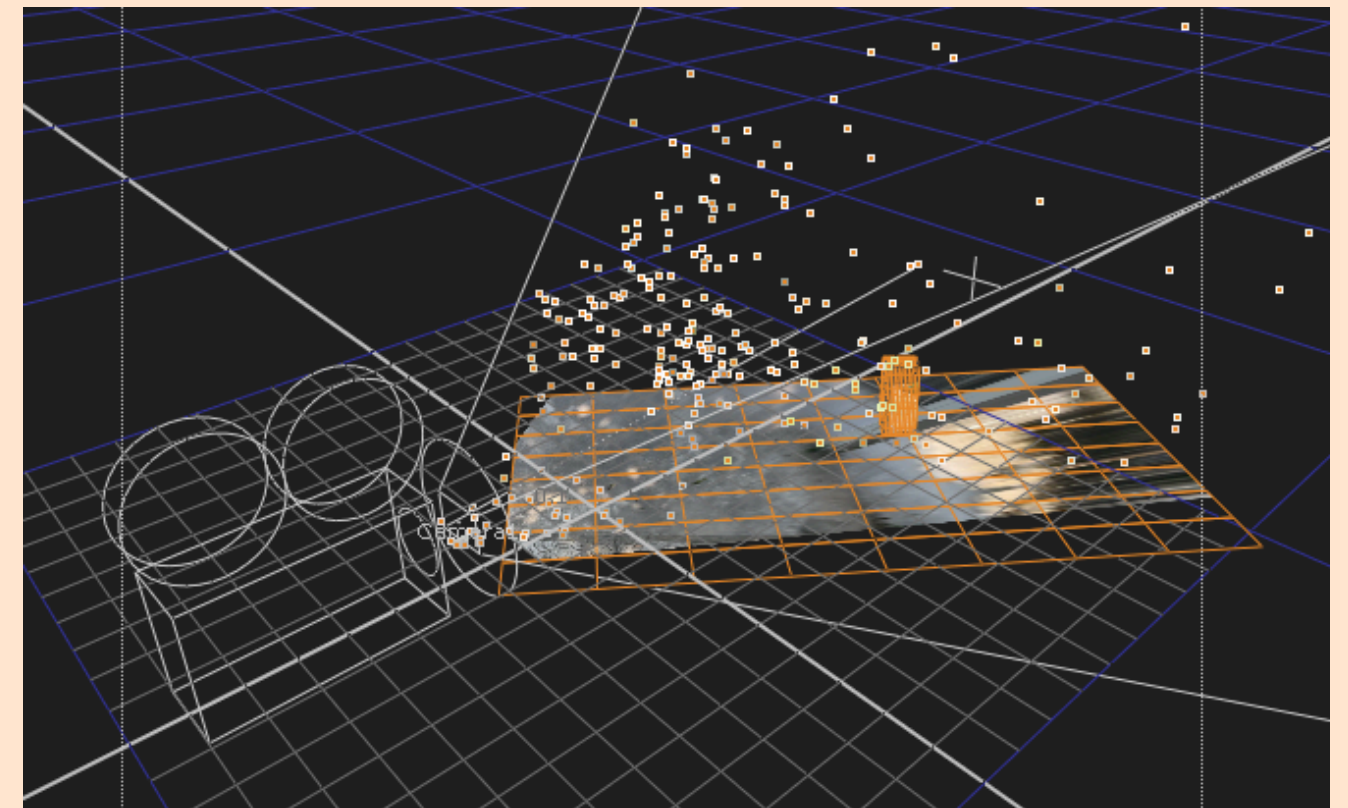

Clipchamp
Video editor

CAMERA TRACKING

Used a checkerboard to calibrate and undistort the camera

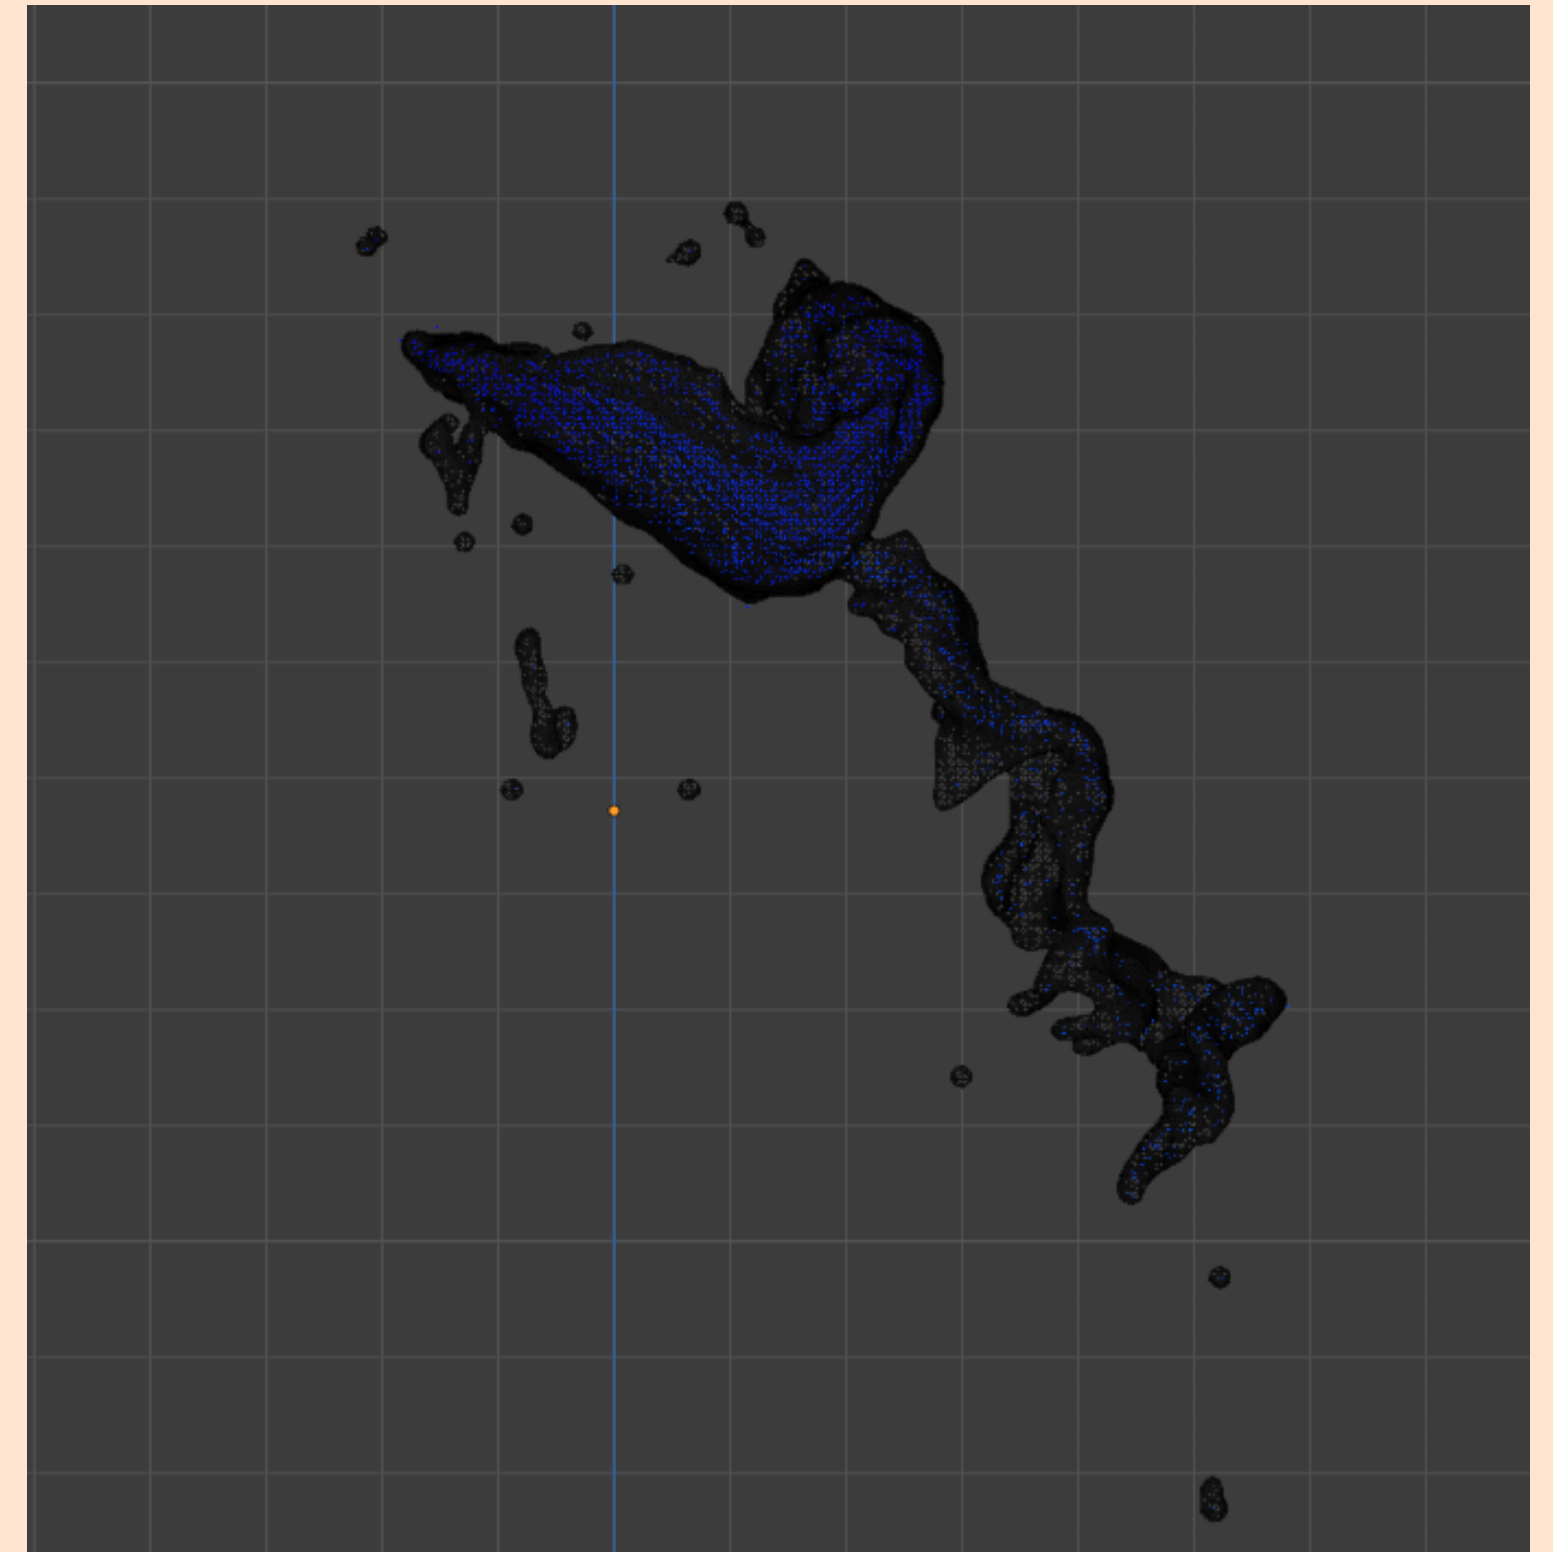

- Detect and track the movement of features in the footage
- 3D Reconstruction
- Solving the camera

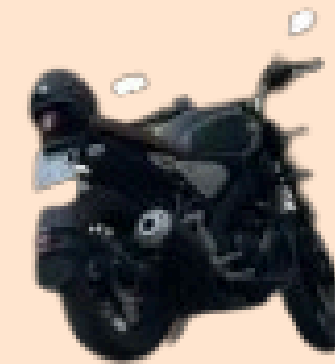

FLUID SIMULATION

Simulate soda drink in Blender

ROTOSCOPING

Some objects in the footage need rotoscoping, manually traced and isolated out from the footage frame by frame

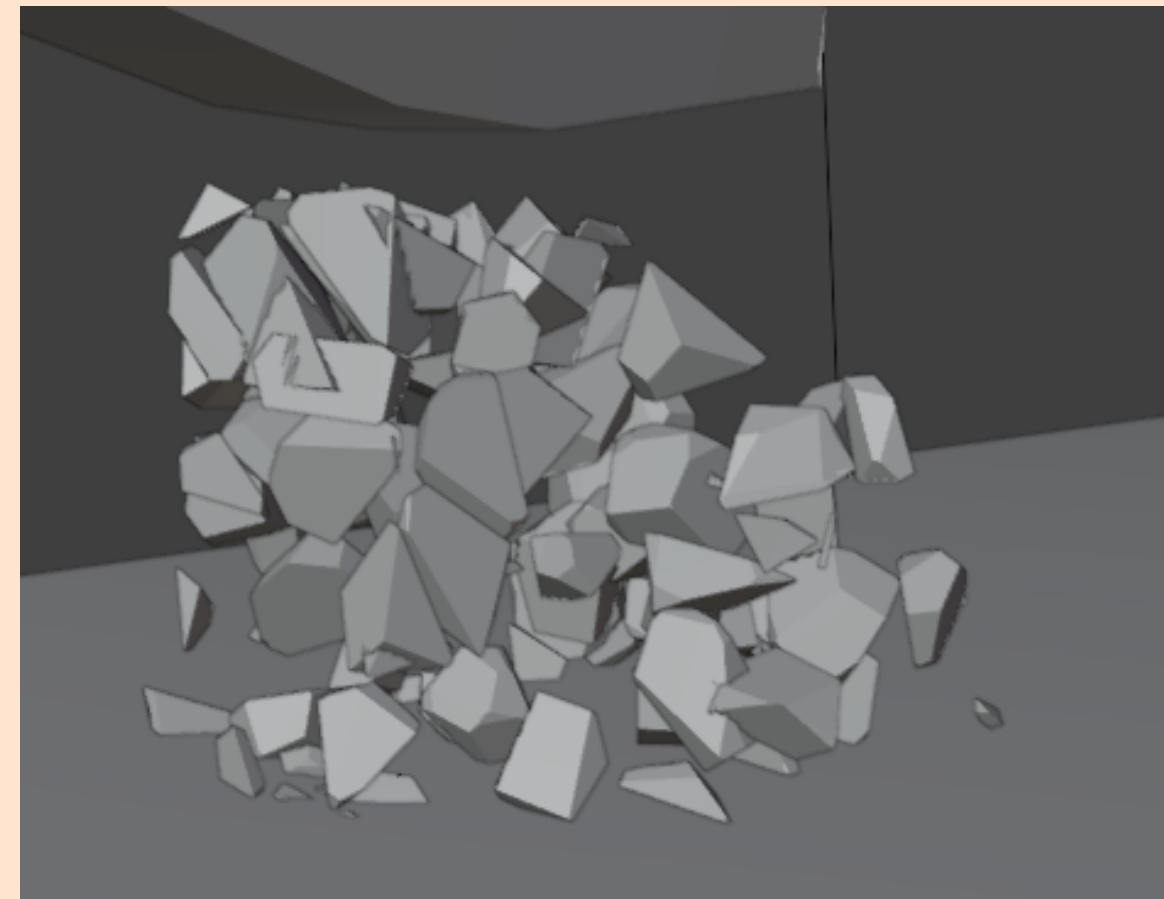

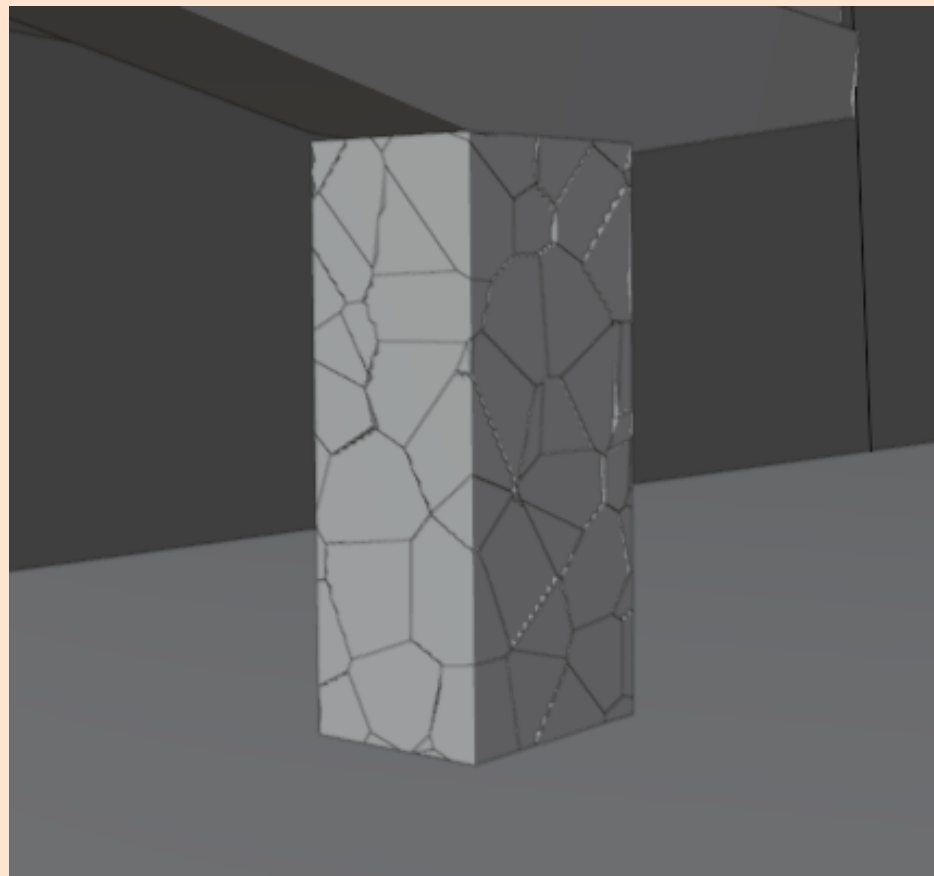

Use rotopaint (or Photoshop) to remove certain elements

PILLAR FRACTURING

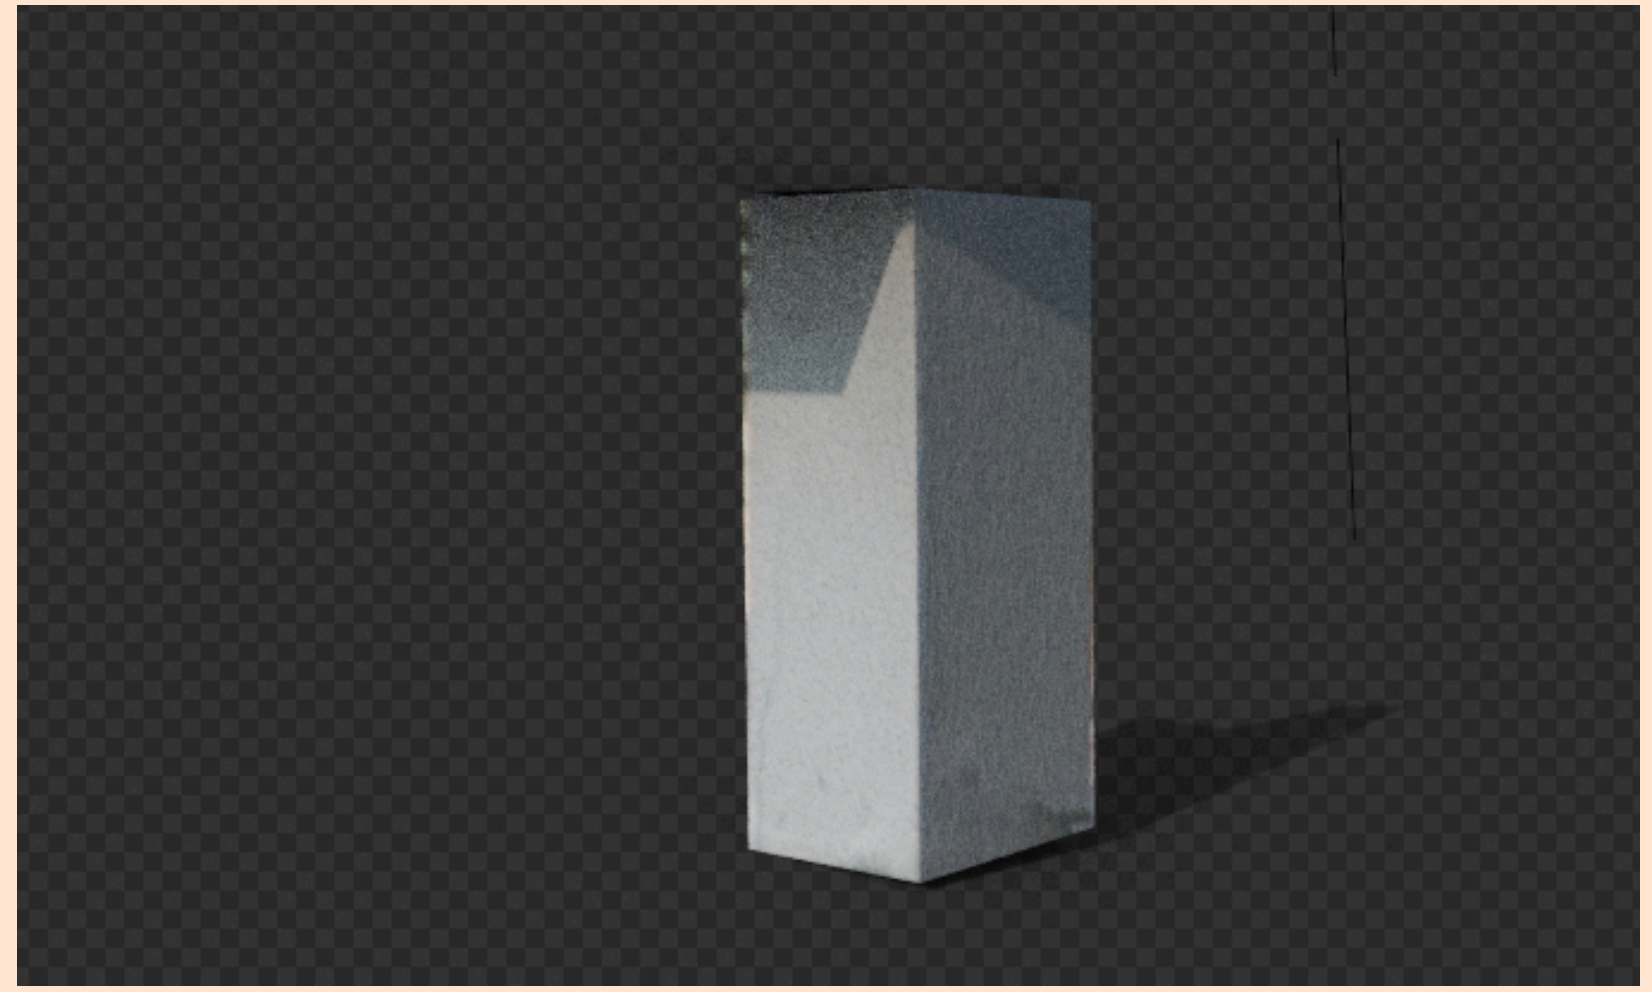

Use Blender to recontruct the pillar

Use physics to simulate the destruction of the pillar

TEXTURING

Use Projection Mapping in Nuke to project the footage to the object, then export it as an image for texturing

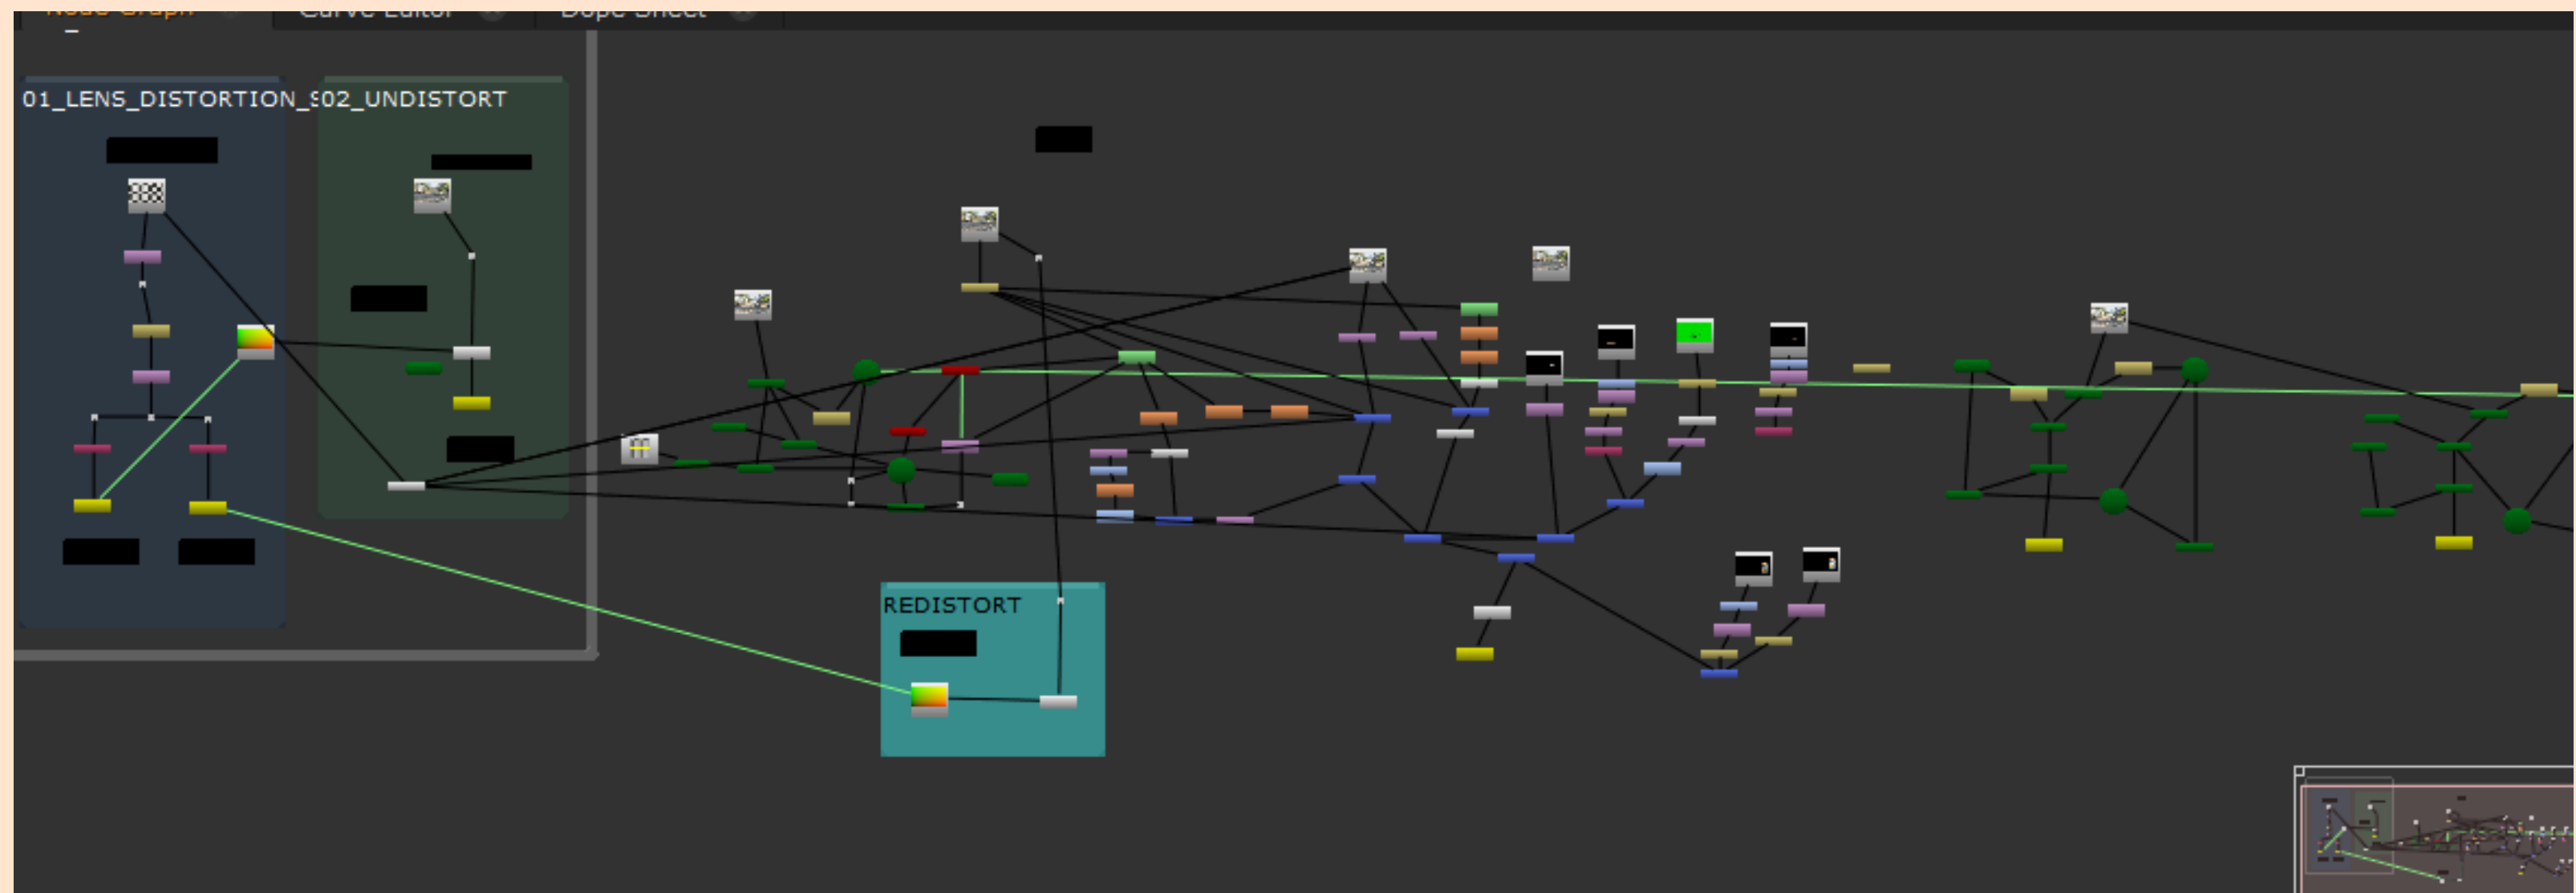

2D ELEMENTS

Add 2D elements like smoke, debris

COMPOSITING

Combine all elements together (Soda can, motorcycle, pillar, smoke...) in Nuke

COMPOSITING

Add special effects like motion blur, camera shake

FINAL RENDER
